

Sierra Wireless Support for Windows 7

SIERRA WIRELESS SUPPORT FOR WINDOWS 7

■ Simplify Your Connection

With Windows 7, the View Available Networks feature within Windows has been expanded to include mobile broadband devices, allowing customers using compatible Sierra Wireless devices to manage all their available network connections from one menu. For network operators and IT organizations, this means that Windows 7 mobile broadband can reduce support, maintenance, deployment and management costs.

■ Choose How You Connect

Products that are Windows 7 mobile broadband logo-approved are also capable of operating Sierra Wireless Watcher™ connection manager or other compatible connection managers simultaneously. This allows customers to choose how they prefer to manage their network connection – either directly through Windows 7 mobile broadband, or via their connection manager software, or both.

■ Which Products are Windows 7 Logo-Approved?

Visit the Sierra Wireless website for products that are Windows 7 logo-approved to date. www.sierrawireless.com/windows7

■ What if the Product is Not Windows 7 Logo-Approved?

Sierra Wireless Watcher connection manager software, device drivers, and Software Developer Kits are also being upgraded to support Windows 7 for all devices that do not support Windows 7 mobile broadband (which provides access through the View Available Networks menu). These devices will only note Windows 7 support as a line item within their specifications.

This means customers will need to update the software and device drivers. This is easily done by inserting the Sierra Wireless device into a Windows 7 PC – whether it be a netbook or high-performance desktop. All the necessary software and drivers will automatically download through the Microsoft Windows update system. When complete, the customer using a device that does not support Windows 7 mobile broadband will have full access to the mobile broadband network but will be required to use Sierra Wireless Watcher or other compatible connection manager to make the connection.

Please visit the [Support](#) page for software and device driver updates.

Features and Benefits

- SIMPLE USER INTERFACE ENSURES EASIER ACCESS TO MOBILE BROADBAND NETWORKS FOR A SUPERIOR CUSTOMER EXPERIENCE
