

■ Proven Ease of Use

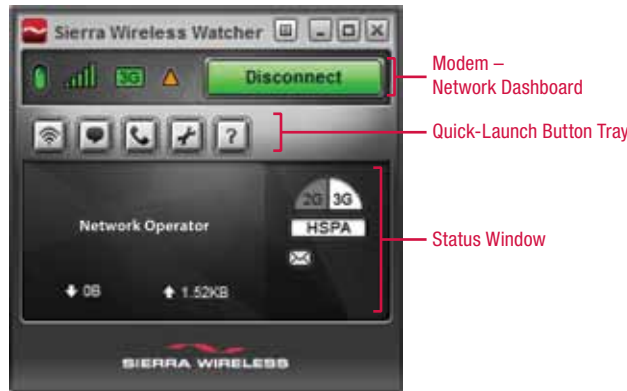

Recognized as a simple and intuitive connection manager, Sierra Wireless's Watcher is used by thousands of Sierra Wireless's modem customers globally. Watcher's ease-of-use and advanced functionality minimizes installation time, supports a fast connection experience, and reduces the number and duration of technical support calls. To simplify the connection process for users, Watcher includes the ability to automatically detect or manually select a network connection profile.

Modem-Network Dashboard and detailed Status Window features provide valuable real-time insight into modem status, connection status, network signal strength, roaming, and network performance, while the Quick Access Button Tray facilitates fast push-button access to the most popular advanced features of Watcher.

■ Simple Installation

Sierra Wireless adapter products equipped with TRU-Install™ will automatically install and launch Watcher once the modem is connected to the computer. There's no CD installation required and users will be up and running, minutes after the modem is plugged into the computer. A simple connection wizard directs users through this effortless installation process.

Watcher is also available complimentary from the Sierra Wireless website at www.sierrawireless.com/support. Watcher for network operator branded Sierra Wireless modems is also available for complimentary download.

■ Receive Updates Automatically

The Sierra Wireless Web Update tool ensures users automatically receive the latest Sierra Wireless Watcher release and ensures the modem is up-to-date with the latest features. Its unintrusive nature means update checks are made only during low usage times so it's never impeding the user's needs to send or receive information. Sierra Wireless Update includes an innovative download-resume capability that stops downloads when the system is in use and resumes downloading when the system is idle. In addition, settings for automatic checks can be configured to your specific preference such as daily or weekly.

■ Enhanced Browsing

Watcher provides an enhanced web browsing experience increasing page download speeds up to fifty percent, regardless of network speed. Watcher optimizes the Internet Explorer web browser specifically for the unique characteristics of wireless WAN networks.

■ RELIABLE, EASY-TO-USE WIRELESS NETWORK CONNECTION MANAGER

■ INTUITIVE USER INTERFACE WITH DEVICE/NETWORK STATUS AND PERFORMANCE INDICATORS

■ UP TO 50% FASTER WEB BROWSING EXPERIENCE

■ WEB UPDATE, SMS, GPS, PHONEBOOK, CALL HISTORY, AND ONLINE HELP

■ ADVANCED FEATURES FOR NETWORK AND DEVICE TROUBLESHOOTING

■ GPS Demo Application

Watcher is equipped with a new Sierra Wireless GPS Monitor supporting Sierra Wireless modems with GPS capability. From the Quick-Launch Button Tray, the GPS icon triggers the GPS Monitor enabling users to control the feature and identify their current location. The GPS Monitor reports the number of satellites acquired, provides all the location information available, and helps tune GPS parameters. The map button exports the current location to either Microsoft Live Search Maps, Google Maps, or Yahoo! Local Maps to get directions and distances. Locate the nearest bank, coffee shop or destination that's of interest to you.

■ Receive and Send SMS Messages

From the Watcher SMS (Short Messaging Service) Express window, users can read, delete and send short messages through the network. All this information can be saved on the user's SIM.

■ Phonebook and Call History

With the Call History window, users can maintain records of all incoming and outgoing data and voice connections. Phonebook entries are cross-referenced in the Call History and SMS Inbox/Outboxes, allowing access to the SIM stored phonebooks.

■ For Advanced Users & Troubleshooters

Advanced users can take advantage of the ability to create, edit and save individual network connection profiles containing specific account information. Multiple connection profiles can be stored on the device, providing users with roaming control and the ability to easily select their desired profile for connection.

For technical support troubleshooters, Watcher allows manual selection of a network band. It's also easy to determine the current CellID and IP address, and to access a phone book and call history of contacts.

■ Online Help

A detailed Online Help guide is available from the Help menu in Watcher. Frequently Asked Questions and troubleshooting tips are included to help users fully understand the capabilities of Watcher.

■ Operating System Support

Windows Vista® (32 and 64 Bit Support), XP (32 and 64 Bit Support), 2000, Windows 7 (32 and 64 Bit Support)
