

Mobile Video Live Streaming

Meet Police Chief Smith

Police Chief Smith oversees a police force in a major US city. Her goals are to ensure community and officer safety and maintain public trust.

THE CHALLENGE

VIDEO FROM VEHICLE AND BODY-WORN CAMERAS CANNOT BE VIEWED IN REAL TIME.

While Chief Smith's command staff have real-time voice communications with officers in the field, they can't leverage in-car cameras in real time. This leaves her command officers "blind" when it comes to making critical decisions during major incidents.

(the "major incidents" qualification so as not to imply that officers can't be trusted to make decisions ordinarily)

THE SOLUTION

DELIVER LIVE VIDEO FEEDS TO THE COMMAND STAFF, OVER MOBILE BROADBAND.

Connect in-car cameras to the vehicle area network created by the Sierra Wireless high-bandwidth rugged AirLink® routers, and live-stream video back to the command center over mobile broadband. The routers use mobile-optimized VPNs with FIPS-compliant encryption to ensure data security and integrity.

THE RESULTS

INCREASED VISIBILITY ENABLES COMMAND STAFF TO BETTER MANAGE INCIDENTS.

With video livestreaming, Chief Smith's command center has increased situational awareness to better guide frontline officers, helping make better decisions that keep them and the community safe.
