

## Safer Checkout Through Touchless POS

### Meet Bill

Bill is the president of a chain of small retail stores supplying feed and agricultural equipment to local farmers. As an essential-service retailer, Bill wanted to ensure the safety of his customers as well as employees.

### THE CHALLENGE

#### QUICKLY IMPLEMENT TOUCHLESS POS SYSTEMS TO ENSURE CUSTOMER AND EMPLOYEE SAFETY

While Bill installed touchless POS systems in all his stores to eliminate the need for physical payment transfer or the use of the keypads, he also made parking lot pick-ups available to minimize the exposure between his employees and his customers. In order to track the transactions outside, he needed a wireless solution that would give him the flexibility to move store checkout lines without having to reconfigure cables running to each device.

### THE SOLUTION

#### GET SECURE WIRELESS POS CONNECTIVITY WITH SIERRA WIRELESS LX60 LTE ROUTERS.

The AirLink® LX60 is purpose-built to deliver secure, reliable out-of-the-box wireless LTE connectivity. The LX60's Wi-Fi capabilities gives Bill the flexibility to locate POS devices wherever needed, and enables him to separate his POS systems from the customer Wi-Fi system delivering increased credit card security. Using Sierra Wireless AirLink® Management System (ALMS), Bill can remotely configure, deploy and monitor all his LX60 devices and deliver security and functional updates with a single command.

### THE RESULTS

#### INCREASED CUSTOMER AND EMPLOYEE SATISFACTION, INCREASED BUSINESS FLEXIBILITY AND SECURITY

Sierra Wireless AirLink® LX60 LTE routers give Bill the flexibility to configure his stores to ensure maximum safety for his customers and employees. He is now able to implement parking lot checkout and scale his POS processes as needed. Bill is also able to use LX60 routers as LTE backup for his store inventory and management systems.
