

Broadband Access for Healthcare

Meet Linda

Linda is the regional operations manager for a franchise of walk-in medical clinics and attached pharmacies who provides medical services, patient scheduling and POS systems in a rental space. She needs to ensure their systems have Internet access for remote management, system monitoring, patient administration and POS transactions.

THE CHALLENGE

SECURING INTERNET CONNECTIVITY

Most small to medium sized medical clinics and pharmacies are co-located in a rented space and the landlord or corporate IT policies may not allow 3rd party suppliers to access to the network. The clinic and pharmacy also needs secure connectivity to ensure customer and patient data privacy for both medical documentation and the POS system required by the pharmacy.

THE SOLUTION

RELIABLE NETWORK SERVICES

Semtech's Broadband Access, an AirVantage® Managed Solution, enables indoor Internet access that can be used as primary access for long term or temporary scenarios. Proactive remote management ensures security of the patient information and POS system. A turnkey managed solution, Broadband Access includes wireless router and antenna, device management, installation and 24/7/365 customer service at a low monthly cost. Internet access for the medical clinic and pharmacy POS system is easily enabled. Providing a cost-effective variety of offerings, our Broadband Access offer fits temporary or longer-term needs. With optional professional installation that can be completed in days, not months like other broadband options, it requires only an AC power outlet and cellular network coverage.

THE RESULTS

MONITORED SYSTEM AND A HEALTHY COMMUNITY

Broadband Access provides a turnkey managed Internet solution that makes running your business quick, easy, and cost-effective. The flexible solution options, ranging from a basic back up service to a fully managed service, removes the barriers of costly investment and the burden of typical long-term commitments. Terms and pooled data plans lowers costs, with simple billing and management.
