

## AirVantage<sup>®</sup> Managed Solutions: Broadband Access for Kiosk/POS

### Meet Tim

Tim is the operations manager for a kiosk vendor who provides kiosks and POS systems in pop up or temporary locations and in rental spaces. He needs to ensure their systems have internet access for remote management and POS transactions.

## THE CHALLENGE

### SECURING INTERNET CONNECTIVITY

Most kiosks are co-located in a rented space and the landlord or corporate IT policies may not allow 3rd party suppliers to access to the network. These kiosks may support pop up or temporary retail situations, often located outdoors, which means an Internet access solution must be able to withstand potentially extreme weather conditions. Bringing wired ethernet and cabling into the kiosk is difficult and can be expensive. Connectivity must be secure, to ensure customer data privacy.

## THE SOLUTION

### CONNECTIVITY SERVICES, SECURED

Broadband Access enables indoor or outdoor internet access that can be used as primary internet access for long term or temporary scenarios. Remote management ensures security of the kiosk or POS system. A turnkey managed solution, Broadband Access includes guaranteed cellular connectivity, wireless router and antenna, device management, installation and 24/7/365 customer service at a low monthly cost. Internet access for the kiosk or POS system is easily enabled. Providing a cost-effective variety of contract terms, from monthly to yearly, it fits temporary or longer-term needs. With professional installation that can be completed in days, not months like other broadband options, it requires only an AC power outlet and cellular network coverage.

## THE RESULTS

### MANAGED CONNECTIVITY, MADE EASY

Whether a kiosk and POS system is placed in an indoor rental space or outdoor environment, Broadband Access provides a turnkey managed internet solution that makes running your business quick, easy and cost-effective. The flexible solution options, ranging from short-term to longer-term, removes the barriers of costly investment and the burden of typical long-term commitments.
